EXPLANATIONS OF ABBREVIATIONS USED IN BIOSYSTEMATIC INDEX

A mnemonic-type abbreviated term appears in the third column of the Biosystematic Index adjacent to each taxonomic entry. The abbreviation represents the subject heading under which the abstract or reference citation is assigned in BIOLOGICAL ABSTRACTS and Bio-Research Index and therefore indicates the type of study with which a particular taxonomic entry is concerned. Space-character requirements of the machine retrieval system used to compose and print the index make these abbreviations necessary. A complete listing of the abbreviated section headings is included for reference throughout the year. This listing will be revised and expanded when necessary and republished with each new volume.

BIOSYSTEMATIC INDEX

The Biosystematic Index is composed of lists of taxonomic categories which are coordinated with the abstract and title numbers published in every issue of ABSTRACTS OF ENTOMOLOGY. Each organism mentioned in an abstract or title published in ABSTRACTS OF ENTOMOLOGY is indexed to these specific taxonomic categories. The notation printed adjacent to the abstract or title number represents the heading to which the abstract or title has been assigned; thus, providing the user with additional information. (See "Explanations of Abbreviations Used in Biosystematic Index" which precedes this index). These abbreviations were derived to conform to the space-character requirements of the machine used to compose and print this index: i.e., GENET GEN (Genetics and Cytogenetics, General); FLOR DISTRIB (Floristics and Distribution); BEHAV CONDIT (Behavioral Biology-Conditioning). An asterisk (*) to the right of the abstract or title number denotes one or more new taxa in the paper.

INSTRUCTIONS FOR USE:

Since the primary aim of the Biosystematic Index is to provide both a taxonomic entry for all the organisms mentioned in every abstract or title as well as the primary field of interest being researched, the Index may be used by itself or in conjunction with one, or all of the other indexes.

Example:

If the reader is interested in studies on beetles, the simplest method is to search Biosystematic Index for entries under Insecta-Coleoptera. The user should note the reference number and refer back to the actual abstract or title.

[*abbreviations of specific subject headings and subheadings under which the particular abstract or title is assigned*]

[*reference numbers*]

[*asterisks indicate new taxa*]

Alternately, if the researcher is interested in coleoptera used within a specific field of study, i.e., the *effective control of beetles*, the best approach is to scan the "Abbreviations Used in Biosystematic Index", which precedes the Biosystematic Index in each issue of ABSTRACTS OF ENTOMOLOGY, checking for the abbreviations of subject headings and subheadings which most clearly approach the user's specific area of research. Using the example presented above, *the effective control of beetles*, the following subject headings and subheadings are selected as suitable:

Economic Entomology (includes Arachnoidea) –
Biological Control = ENT BIO CONT

Economic Entomology (includes Arachnoidea) –
Chemical and Physical Control, General; Apparatus = ENT CHEM CONT

A check of the Coleoptera entries in the Biosystematic Index reveals nine references, (51-5374, 51-5377, 70-1094, 70-2279, 70-2280, 70-4781, 51-5385, 51-5390, 51-5396) whose primary field of study is one of the selected abbreviated headings and subheadings listed above. Thus, by using one index, the taxonomically-oriented user can effectively search the material published in ABSTRACTS OF ENTOMOLOGY.

Combining Biosystematic Index with CROSS Index

A more intensive search of the literature published in ABSTRACTS OF ENTOMOLOGY can be accomplished by combining the taxonomic groupings in the Biosystematic Index with the subject headings of CROSS. For further information and a suggested procedure, see the "Instructions For Use of CROSS Index" which precedes the CROSS Index.

Combining Biosystematic, CROSS and Subject Indexes

Often, deep searches in relatively obscure fields of study require a highly sophisticated retrieval system. By combining the Biosystematic (for taxonomy), the CROSS (for subject headings) and the Subject indexes (for specific keywords), the researcher can retrieve all abstracts and titles pertinent to any field of study published in ABSTRACTS OF ENTOMOLOGY. For further information and a suggested procedure, see the "Combination of Indexes with the Subject Index" under the "Instructions for Use of CROSS Index."

THE CROSS INDEX

ARRANGEMENT: The CROSS Index contains the numbers of all abstracts and titles appearing in ABSTRACTS OF ENTOMOLOGY. These references are numerically arranged under major subject headings or subheadings. When a given abstract or title number relates to several subjects, it will appear under as many headings or subheadings as are necessary to index that abstract or title properly.

For convenience in searches, the major subject headings and their respective subheadings are alphabetized with the reference numbers arranged in six vertical columns beneath these headings.

Example: Sample heading as it appears in CROSS Index:

[*alphabetized major*

INSTRUCTIONS FOR USE: Since the primary aim of CROSS is to coordinate (cross relate) all abstracts and titles in ABSTRACTS OF ENTOMOLOGY which are specifically or generally pertinent to a particular subject, CROSS may be used to select abstracts and titles which are related to any number of subject headings.

References located under a given CROSS heading may be compared with those under one or more other headings. The selection of identical reference numbers appearing under more than one subject heading would result in the retrieval of abstracts and titles containing references relative to the several headings.

Example:

When the reader desires all references concerned with *insect heart response to cardio-accelerators,* the search method is as follows:

1. Scan the "Alphabetical Listing of Subject Headings Which Appear in the CROSS Index." This section precedes the actual index.
2. Determine the specific subject headings which cover the study being searched (i.e., those factors which are absolutely necessary to obtain the information desired). In the following example, the most pertinent subject headings are:
    - Comparative and Experimental Invertebrate Morphology, Physiology and Pathology—Insect Physiology
    - Cardiovascular System—Physiology and Biochemistry
    - Pharmacology—Cardiovascular System
3. To facilitate the search, start with the subject heading which contains the least number of entries. Match the reference numbers listed under this subject heading against the other specific headings which have been selected. In the example given, the subject heading with the least number of entries is "Pharmacology—Cardiovascular System." Compare these numbers with those of "Cardiovascular System—Physiology and Biochemistry." The reference numbers retrieved from this correlation are checked against those of "Comparative and Experimental Invertebrate Morphology, Physiology and Pathology—Insect Physiology." The reference numbers which match contain information relevant to the subject under study (i.e., pertain to all three subject headings).

EXAMPLE:

In the case of the hypothetical example being discussed, the following reference numbers appear under each Subject Heading and are pertinent to the problem being searched:

51-064333
51-064381
51-065175
70-044821
70-046005

[*arrows indicate those reference numbers which appear under all of the preselected subject headings*]

COMBINING CROSS INDEX WITH BIOSYSTEMATIC INDEX

A more intensive search of the materials published in ABSTRACTS OF ENTOMOLOGY can be undertaken by using the taxonomic groupings in the Biosystematic Index, which directly precede the CROSS Index in each issue of ABSTRACTS OF ENTOMOLOGY. For example, if the reader desires to narrow the search to a specific taxonomic group, e.g., ORTHOPTERA, this search could be accomplished

COMBINING CROSS INDEX WITH BIOSYSTEMATIC INDEX —Continued

quickly and easily by turning to the Biosystematic Index and checking the abstract and title numbers listed under INSECTA-ORTHOPTERA against those reference numbers previously obtained from searching the CROSS Index. The reference numbers that appear under both INSECTA-ORTHOPTERA in the Biosystematic Index and under the pertinent subject headings under CROSS will contain the precise factors sought (i.e., *cockroach heart response to cardio-accelerators*).

Suggested Procedure:

1. List the reference numbers retrieved from the CROSS Index and compare them with the abstract and title numbers listed under INSECTA-ORTHOPTERA in the Biosystematic Index.
2. Check the reference numbers which appear under both the pertinent subject headings in the CROSS Index and under INSECTA-ORTHOPTERA in the Biosystematic Index.
3. Disregard those reference numbers which do not appear in both the CROSS and Biosystematic Index.

[*arrows indicate those reference numbers which appear under the Biosystematic Index and also under all the subject headings searched in CROSS*]

[*asterisks indicate new taxa*]

The reference numbers retrieved from the CROSS Index were:

51-064333
51-064381
51-065175
70-044821
70-046005

Because the reference numbers **51-065175** and **70-044821** are not indexed under the taxonomic group INSECTA-ORTHOPTERA, they should be disregarded.

4. The reference numbers which remain (i.e., **70-046005**, **51-064333** and **51-064381**) are certain to contain the information the user desires.

COMBINATION OF INDEXES WITH THE SUBJECT INDEX

Still greater usefulness of ABSTRACTS OF ENTOMOLOGY can be achieved by using the CROSS Index in combination with the Biosystematic and Subject indexes. A combination of selected key-terms from the Subject Index with specific subject headings in CROSS may be used to locate information on various interrelated subjects.

Suggested procedure:

1. List all the potential, significant keywords to be searched in the Subject Index and the appropriate subject headings to be searched in CROSS Index.

COMBINATION OF INDEXES WITH THE SUBJECT INDEX—Continued

2. Search the Subject Index for these preselected key-terms and scan the adjacent, modifying terms for further meaning and content. If interest is confirmed, note the reference number to the right.
3. Check each of the preselected subject headings under the CROSS Index.
4. By referring only to those reference numbers which appear under all of the preselected subject headings in CROSS and which follow significant keywords in the Subject Index, the researcher will obtain information specifically concerned with his field of study.

If the study emphasizes specific organisms, the researcher may turn to the taxonomic groupings in the Biosystematic Index which will lead to reference numbers pertaining to organisms which may be of interest in specific applications. These fields of interest can be selected by comparing the reference numbers under the Biosystematic Index with those appearing under appropriate section or subsection headings in CROSS, and with those listed following selected, alphabetically indexed keywords in the Subject Index. By using only those reference numbers which appear in all three indexes, the search is progressively narrowed to specific papers pertinent to the defined interest of the searcher.
